You got the Vision
to Realize!
We got the Mission
to Visualize!!

VISUALIZE TO REALIZE

Simlabs Software LLP (SIMLABS®) is a leading virtual reality, augmented reality and visual simulation technology firm with great expertise and experience in delivering wide variety of advanced and custom developed interactive, immersive and simulation based high quality services as well as products.

APPLICATION AREAS

SIMLABS offers virtual reality (VR), augmented reality (AR) and visual simulation (VS) services and products to address wide spectrum of application areas.

- Maintenance training
- Operational training
- Safety training
- Product marketing
- Design & Ergonomics studies
- Remote assistance / mentoring
- Technical assistance
- Product trial and shopping
- IoT based assistance
- Machine Learning based assistance
- War gaming
- Training Simulators

SEGMENTS

SIMLABS offers services and products across various industry segments which include Aerospace, Defence, Automotive, Heavy Equipment, Architecture, Oil & Gas, Healthcare, Transport, Engineering, Entertainment, Education etc.

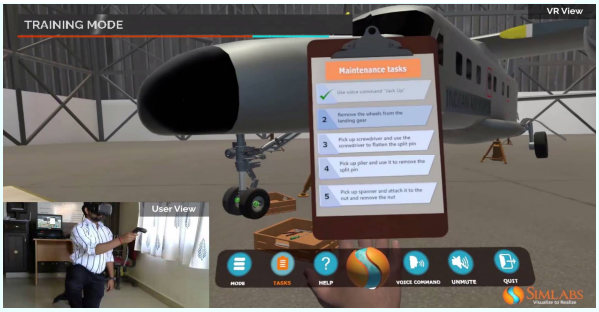
Expertise Quality Performance

VIRTUAL REALITY VR

Advanced, high-quality, high-performance, immersive, interactive and real-time simulation based virtual reality solutions offered by SIMLABS are being well appreciated by customers across various industry segments. Well optimised visual content and applications, real-time simulations and user interface developed by SIMLABS takes the virtual learning or experience close to reality. SIMLABS offers virtual reality solutions for almost all kinds of supporting hardware in the market.

MAINTENANCE TRAINING

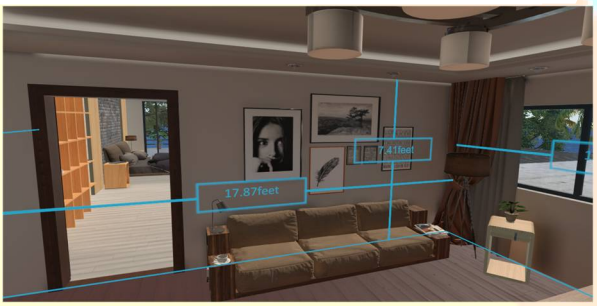


VR based maintenance training applications come with exploration, guided learning and test modes, and with optional features such as instructor interface, collaborative tasks and test reports generation.

OPERATIONAL TRAINING

VR based operational training applications come with simulation based guided learning and test modes, and with optional features such as instructor interface, collaborative tasks and test reports generation.

PRODUCT WALKTHROUGH



VR based product experience applications come with interactive features which help in architectural walkthroughs and in interactive experience of any product.

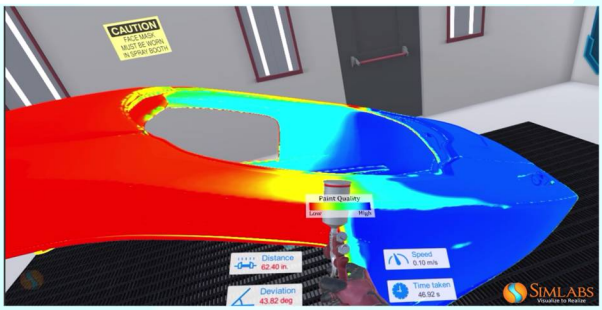
VIDERE/DESIGN STUDIES

VIDERE is a VR based software intended for product design and ergonomics studies. It comes with features such as real-time cross-sectional views, measurements in 3D space, collision detection, log reports etc.

VRSAFE

VRSAFE is a VR based fire safety and personal protective equipment training product that comes with multiple scenarios and report generation features.

PAINTX



VR based product for learning and evaluation of automotive and other industrial product painting skills.

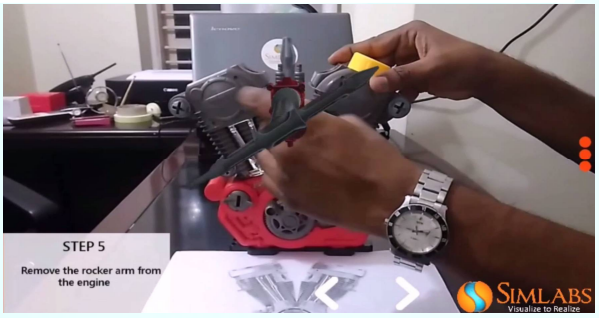
Expertise Quality Performance

AUGMENTED REALITY AR

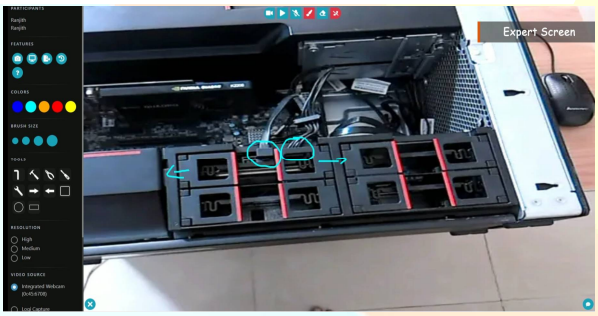
SIMLABS offers advanced and interactive augmented reality solutions for technical assistance, remote assistance, product demonstration/marketing, training and evaluation, for various industry segments. Also, SIMLABS has expertise in integration of other latest technologies such as internet of things (IoT) and artificial intelligence/machine learning (ML) with augmented reality to produce intelligent applications. Augmented reality applications developed by SIMLABS are available for all supported smart phone/tab, HoloLens, AR glasses, PC etc.

TECHNICAL ASSISTANCE



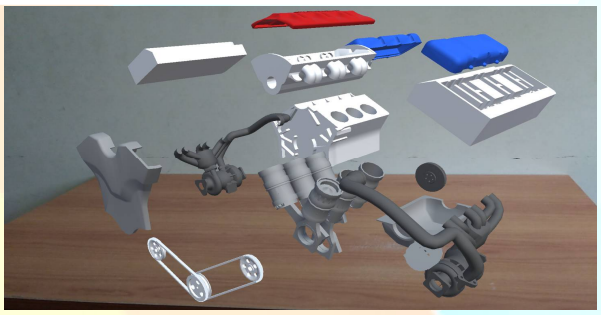
AR based technical assistance applications come with augmentation of computer-generated content on physical system to provide step by step guidance for technician in maintenance or training procedures.

AUGMENTOR



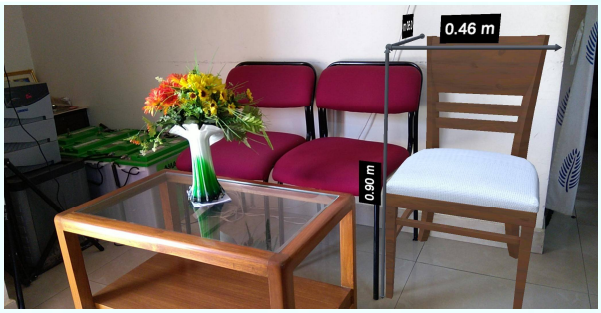
Augmentor is a remote assistance/mentoring product, comes with two-way video, audio and chat communication, two-way augmentation of annotations and tools, screen sharing, screen capture, support ticket creation, and many other features.

PRODUCT DEMO



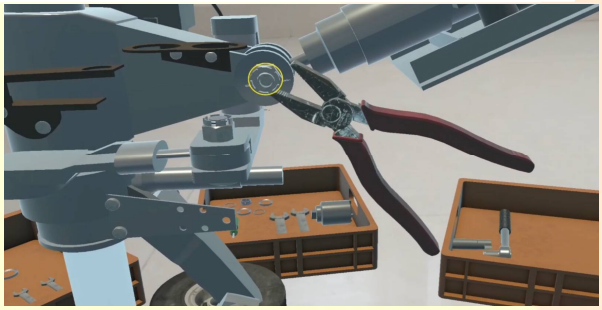
AR based product demonstration/marketing applications help in demonstrations, discussions and events to give an interactive experience of products and let user explore product features.

FARNISH



Farnish is an AR based furniture trials and shopping product, helps in browsing through the products, try placing virtual furniture models in room, check the fitment, capture images, and then purchase.

MIXED REALITY



Mixed reality (MR) based technical assistance applications come with augmentation of computer-generated content in physical space to provide step by step guidance for technician.

IoT + AR

SIMLABS offers IoT data integrated intelligent augmented reality applications. IoT+AR applications enable users to access dynamic data and perform procedures accordingly with augmented guidance.

Expertise Quality Performance

VISUAL SIMULATION VS

SIMLABS offers advanced simulation software products for 3D model development, 3D terrain development, war gaming, tactical simulations, sea & weather effects simulation, sensor simulation and HMI displays simulation which help in development of pilot training simulators, driving simulators, mission planning, war gaming simulators, weapon training simulators, visual feasibility studies, UAV simulations, etc. Also, SIMLABS offers optimised 3D models, 3D terrains, visual simulation applications, CBTs, desktop simulators development.

VISUAL SIMULATION SOFTWARE

SIMLABS has partnered with world leading visual simulation software technology firms, to offer COTS software which help in building many kinds of visual simulation applications.

- Terrain Modelling Software
- 3D Object Modelling Software
- Wargaming Software
- Sensor Simulation Software
- Ocean & Water Simulation Software
- Sky & Cloud Simulation Software
- HMI Displays Simulation Software

VISUAL SIMULATION SERVICES

SIMLABS has expertise in delivering optimised 3D visual database, real-time visual simulation applications, CBTs and desktop simulators.

- 3D modelling
- Terrain modelling
- Visual simulation application development
- CBTs development
- Desktop simulator development
